2026/06/30 04:35:15 WARNING mlflow.utils.autologging_utils: MLflow autologging encountered a warning:
"/opt/hostedtoolcache/Python/3.11.15/x64/lib/python3.11/site-packages/mlflow/types/utils.py:452: UserWarning:
Hint: Inferred schema contains integer column(s). Integer columns in Python cannot represent missing values.
If your input data contains missing values at inference time, it will be encoded as floats and will cause a
schema enforcement error. The best way to avoid this problem is to infer the model schema based on a
realistic data sample (training dataset) that includes missing values. Alternatively, you can declare integer
columns as doubles (float64) whenever these columns may have missing values. See 'Handling Integers With
Missing Values <<https://www.mlflow.org/docs/latest/models.html#handling-integers-with-missing-values>>' for
more details."

Registered model 'ibm_attrition_detector' already exists. Creating a new version of this model...

2026/06/30 04:35:27 INFO mlflow.store.model_registry.abstract_store: Waiting up to 300 seconds for model
version to finish creation. Model name: ibm_attrition_detector, version 3

Created version '3' of model 'ibm_attrition_detector'.

Dataset Drift

Dataset Drift is detected. Dataset drift detection threshold is 0.5

26

Columns

21

Drifted Columns

0.808

Share of Drifted Columns

Data Drift Summary

Drift is detected for 80.769% of columns (21 out of 26).
